

List Quality Scorecard

Pre-Send Grading · 8 Dimensions · A+ to F

GTM PLAY GUIDE · RASUL SHAIKH · 2026

WHAT IT GRADES

Email verification coverage. Duplicate emails and domains. Title relevance vs ICP. Bad-title patterns (intern, assistant). Catch-all density (info@, contact@). ICP fit on industry + headcount. Name quality.

COMMANDS

```
python scorecard.py --list leads.csv --out scorecard.md
python scorecard.py --list leads.csv --icp-file client-profile.yaml --json scorecard.json
```

GRADE MAPPING

A/A+ (90+): Ship it. B (80-89): Minor fixes then ship. C (70-79): Fix top 3 issues. D (60-69): Serious cleanup. F (<60): Rebuild the list.

N8N WORKFLOW

Import n8n/pre-send-list-gate.json. Webhook receives leads from Clay export. Scores list in-code. Grade B+ routes to Smartlead push. Grade C or below blocks send and alerts Slack.

PIPELINE POSITION

Run AFTER email enrichment, BEFORE Smartlead upload. Pair with gtm-deliverability-audit for post-send health.
